

Hi friends, I am sharing one of the instances of my Engineering life. I joined Engineering with a lot of hope. But I was very weak in Mathematics. I was not able to clear Engineering Mathematics I. I got backlog in Mathematics I in my first sem. When results came, I got scolded from parents for my bad result because of Math.

In my 2nd Sem, I had to deal with another math, Engineering Mathematics II. I heard about many seniors who got a year back just because they can't clear math. I started to fear if I can even clear two engineering mathematics in a single semester which was a huge challenge for me.

At that situation, I decided to take coaching and researched about **best Engineering Maths tutorials in Bangalore**. I came to know about the Aradhya Tutorials from my friend. I went to attend their demo classes initially. The first day I was impressed by the classroom infrastructure of Aradhya tutorials. The classroom was what the classroom around the world should have. There was not much teaching on the first day. But after attending 3 demo class for the first time I felt math was so easy. I was able to understand their way of teaching in very simplest ways. They built interest for me to learn Mathematics. They made me understand each and every formula with shortcuts and so that we can remember those formulas instantly.

Not only math but I also joined for Basic Electronics and Basic Electricals. I scored good marks in my Engineering Subjects by following their suggestions.

The notes of Aradhya Tutorials is very simple and Effective so that each and everyone can understand easily. They taught the subjects not for the examination point of view but also for the career point of view, which is the base for whole career life. Effective discussion of questions papers helped me a lot to clear my Engineering Mathematics at that critical situation which could have ended me in a year back.
